March 2015 to 2020

Largest non-city route in the company and grew business by almost 18%. Founded beer knowledge training program.

Education

2021
Software Engineering Immersive Fellow
General Assembly

2006-2008
International Economic Relations
American University

Ron Garofalo
Full Stack Software Developer

Full Stack Software Engineering allows me to fulfill my need for a creative outlet and scratch my problem solving itch while honing my professional skillset. I truly am a lifelong learner, and my approach to learning a new skill has led me to teach peers in a wide variety of topics - from Tang Soo Do as a teenager (a Korean martial art), to sales in my 20s, to professionally tasting (read: drinking) beer in my late 20s and early 30s. I have that same desire to learn, refine, and share the skill of software development, so I spend my days coding. That feeling of finally figuring out a problem and everything just clicks into place is my daily white whale.

Relevant Programming Projects - 1.5 Years

Mamoo
Full Stack Application || Solo Project
yourmamoo.netlify.app

A self-deployed responsive full stack application built to allow authenticated users to mark important events in their lives and quantify time passed. Full CRUD operations.

Technologies Used
- Python
- JavaScript
- React.js
- Django
- JWT
- GitHub
- Netlify
- RESTful API
- PostgreSQL

YourCraft
Full Stack Application || Team Project
your-craft.netlify.app

A full stack responsive inventory application built with a team that allows all users to see what craft brewers have in stock, and allows authenticated users to create, update and delete beverages.

Technologies Used
- React.js
- JavaScript
- Express JS
- JWT
- GitHub
- Netlify
- RESTful API
- Axios

Our Wedding Website
Front End Application || Solo Project
emron.netlify.app

A self-deployed responsive front end React Application built with non-technical users in mind. Built to be mobile first with a custom made carousel and a navbar that changes titles based on where the user has scrolled. Allows users to RSVP and Email us with EmailJS.

Technologies Used
- React.js
- JavaScript
- EmailJS
- GitHub
- Netlify

My Portfolio
Front End Application || Solo Project
ron-garofalo.netlify.app

A self-deployed front end React Application built to showcase projects and technical skills. Features a custom Parallax design with responsive grid layout. Allows users contact via email and view GitHub repositories.

Technologies Used
- React.js
- JavaScript
- EmailJS
- GitHub
- Netlify
- React Bootstrap

RandomQuest
Front End Application || Solo Project
randomquest.netlify.app

A self-deployed game built using React.js where users generate random enemies, attacks and outcomes. Tracks High Score.

Technologies Used
- React.js
- JavaScript
- GitHub
- Netlify
